Movie Reviews

Movie reviews: Q1

Find positive reviews (LIMIT 5).

File: `files/movie/query/bigquery/Q1.sql`

```
SELECT reviewId
FROM movie.reviews AS r
WHERE AI.IF(('Determine if the following movie review is clearly positive, review:
', r.reviewText))
LIMIT 5;
```

Movie reviews: Q3

Count positive reviews of `taken_3`.

File: `files/movie/query/bigquery/Q3.sql`

```
SELECT COUNT(*) AS positive_review_cnt
FROM movie.reviews AS r
WHERE r.id = 'taken_3' AND AI.IF(('Determine if the following movie review is
clearly positive, review: ', r.reviewText));
```

Animals / Wildlife

Animals / wildlife: Q1

How many images show a zebra?

File: `files/animals/query/bigquery/Q1.sql`

```
-- Q1: How many pictures of zebras do we have in our database?
-- Ground truth: select count(*) from ImageData where Species LIKE '%ZEBRA%';
SELECT COUNT(*) AS count
FROM animals_dataset.image_data_mm
WHERE AI.IF(('Does this image contain a zebra?', image));
```

Animals / wildlife: Q10

City and station with the most zebra images.

File: files/animals/query/bigquery/Q10.sql

```
-- Q10: What is the city and station with most associated pictures showing zebras?
-- Ground truth: select city, stationID from ImageData where Species LIKE
'%ZEBRA%'  group by city, stationID order by count(*) DESC limit 1;
SELECT City AS city, StationID AS stationID
FROM animals_dataset.image_data_mm
WHERE AI.IF(('Does this image contain a zebra?', image))
GROUP BY City, StationID
ORDER BY COUNT(*) DESC
LIMIT 1;
```

MMQA

MMQA: q1

Extract the director from each movie description; return the director of the movie in which Ben Piazza played "Bob Whitewood".

File: files/mmqa/query/bigquery/q1.sql

```
WITH movie_with_director AS (
    SELECT t.title, AI.GENERATE(
        prompt => ("Extract the director name from the following movie
description: ", t.text)
    ).result AS director
    FROM mmqa.ben_piazza_text_data t
)

SELECT t2.director
FROM mmqa.ben_piazza t1
JOIN movie_with_director t2
ON t1.Title = t2.title
WHERE t1.Role = "Bob Whitewood";
```

MMQA: q2a

Match horse racetracks to images of their logos.

File: files/mmqa/query/bigquery/q2a.sql

```
SELECT t.ID, i.uri
FROM mmqa.ap_warrior t, mmqa.images i
WHERE AI.IF(
  STRUCT(
    "You will be provided with a horse racetrack name and an image. ",
    "Determine if the image shows the logo of the racetrack. ",
    "Racetrack: ", t.Track, ", Image: ", i.uri
  )
);
```

MMQA: q7

Match airlines to images of their logos.

File: `files/mmqa/query/bigquery/q7.sql`

```
SELECT t.Airlines, i.uri
FROM mmqa.tampa_international_airport t, mmqa.images i
WHERE AI.IF(
    STRUCT(
        "You will be provided with an airline name and an image. ",
        "Determine if the image shows the logo of the airline. ",
        "Airline: ", t.Airlines, ", Image: ", i.uri
    )
);
```

E-Commerce

E-commerce (fashion products): q1

Products that are backpacks from Reebok (text).

File: `files/ecomm/queries/dialects/bigquery/q1.sql`

```
SELECT
  id
FROM fashion_product_images.STYLES_DETAILS
WHERE true
  AND AI.IF(
    ('The product is a backpack from Reebok: ',
     styles_details.productDisplayName, ' ',
     styles_details.productDescriptors.description.value)
  )
;
```

E-commerce (fashion products): q3

Extract the brand name of every product from its title and description (text).

File: `files/ecomm/queries/dialects/bigquery/q3.sql`

```
SELECT
  id, AI.GENERATE(
    ('Extract the brand name from the following product description. Only return
the brand name, nothing else: ',
    styles_details.productDisplayName, ' ',
    styles_details.productDescriptors.description.value)
  ).result AS category
FROM fashion_product_images.STYLES_DETAILS;
```
